SANITARI PLUS

PRODUCT DESCRIPTION

SANITARI PLUS is a one-part acetoxy silicone sealant, fast curing, mildew resistant.

PRODUCT CHARACTERISTICS

Excellent adhesion to glass, ceramic, porcelain, suitable for sealing baths and kitchens.

TYPICAL USES (professional)

- For perimeter sealing of baths, washbasins, showers, w.c.
- For sealing joints between tiles.
- For sealing sinks, cooktops.

LIMITATIONS

- SANITARI PLUS must not be used for insulating glass applications nor for structural glazing bonding.
- It is not recommended for the production of aquaria nor for longterm use under water.
- Not suitable for joints in swimming pools and adjacent areas that are in continuous contact with pool water.
 It should not be used in contact with marble, natural stones.
- It should not be used in contact with metals such as lead, copper, brass or zinc due to acid acetic corrosion.
- It should not be used on substrates such as concrete, fibrous cement and mortar.
- It should not be used on polycarbonate and acrylic sheets.
- It should not be used in contact with materials bleeding oily matters or plasticizers, nor on surfaces to be overpainted.
- It is not suitable for use in food contact applications.
- The sealant is not recommended for use in totally confined joints not exposed to air moisture nor for use in joints submitted to abrasion.
- Do not use in extreme temperature conditions, or on damp, frozen, contaminated surfaces.
- Do not use on excessively acidic or basic substrates.
- It is not suitable for use as a mirror adhesive.
- For any application not listed in this document please contact our Technical Service.

TECHNICAL DATA

Polymers the curing system:	100% silicone, acetoxy	
, , ,		
Consistency:	tixotropic, non-slumping paste	
Application temperature:	+5°C / +40°C	
Specific gravity:	1,01 g/cm ³	
Skin forming time (23°C / 50 % R.H.):	20 minutes	
Curing time:	1 - 5 days depending on temperature and humidity and on cross section of applied sealant cord	
Shore A Hardness (ISO 868):	18	
100% Modulus (ISO 8339-A):	0,38 N/mm²	
Tensile strength (ISO 8339-A):	0,7 N/mm²	
Ultimate elongation (ISO 8339-A):	250%	
Tear resistance (ISO 34-C):	4,5 N/mm	
Service temperature range:	-40°C / +100°C	

The values in this table must not be considered as specifications.

EN15651-1: F-EXT-INT-CC 25 LM
EN15651-2: G-CC 25 LM
EN15651-3: XS1

15651-1: F-EXT-INT-CC 25 LM sealant for façade for interior and exterior application (intended for use in cold climates). EN 15651-2: G-CC 25 LM sealant used for sealing glazing applications (intended for use in cold climates). EN15651-3: XS 1 sealant for joints in sanitary areas.

METHOD OF USE

Adhesion and surfaces preparation: the surfaces that will be in contact with the sealant must be clean, dry and free of all loose material such as dust, dirt, rust, oil and other contaminants.

Non-porous substrates should be cleaned with a solvent and a clean, lint-free, cotton cloth.

Remove residual solvent before it evaporates with a fresh clean, dry cloth.

SANITARI PLUS has an excellent adhesion to glass, glazed surfaces and to anodized aluminium.

Onto aluminium, stainless steel, painted surfaces and plastics previous testing is recommended and the use of a suitable Primer is suggested. See table of "Primers for silicone sealants".

It is the responsibility of the user to test the compatibility of the sealant with the adjoining materials.

Incompatible substances like coating materials (paints, varnishes and glazes) or organic plasticizer containing rubbers (EPDM, butyl and neoprene) can lead to discoloration or other impairments like loss of adhesion of the sealant.

Materials in direct contact with the applied sealant like cleaning agents and materials in indirect contact like gaseous emissions can damage the sealant in its function or change its appearance.

Because of the multitude of these materials, Fratelli Zucchini S.p.A. cannot make a general statement to the compatibility of materials with the sealant. In case of doubt the user shall conduct appropriate preliminary tests.

The time until complete curing may be extended at lower temperature, lower humidity, increasing film thickness or by low volume of air exchange.

Recommended joint dimension (see picture): joints designed to accommodate movement should have rectangular section and depth at least 5 mm., the joint width at least five times total expected movement and always twice as depth.

For a correct dimensioning of joint cross section insert to the joint back FILTENE, a closed cell polyethylene foam release profile.

Application: apply by hand or by gun. Tooling can be carried out soon before curing.

Solvent wiping: dirty tools can be solvent wiped with SOLVENTE ST/512. After curing SANITARI PLUS can be removed mechanically.

SANITARI PLUS can't be overpainted.

SAFETY AND HEALTH

See Safety Data Sheet. SANITARI PLUS produces acetic acid vapour during cure, avoid inhaling the vapours as well as contact with eyes and skin.

All recommendations relating to application and use of Fratelli Zucchini S.p.A. products have been given based on Fratelli Zucchini S.p.A. knowledge and experience, for products appropriately stored, handled and applied in suitable conditions, as indicated in their respective Technical Datasheets. The variability of materials, substrates and conditions of use is such that no warranty of their functionality for a specific application can be deducted from this information, written or verbal recommendation or any other type of suggestion offered. Each user has the responsibility to complete adequate evaluations on the efficacy of the materials offered by Fratelli Zucchini S.p.A., of its products, services, recommendations and suggestions for the specific application need, and must accomplish sufficient testing to ascertain that the final product will be safe and sound for the final intent of the end-user. Fratelli Zucchini S.p.A., therefore, cannot be fit considered liable for any damage, direct or indirect even for possible wrong, incorrect and unfit use of the products.
